

Task :

1. Show an **alert message** to the user when the page first loads using an **IIFE function**:
 - Message: "Welcome to my site"
2. Ask the user to **enter his/her name** using a **prompt**, then print a personalized greeting:
 - Example: "Welcome Esraa!"
3. Create a **2D array** of student marks for each class (each row = class, each column = marks of students).
4. Calculate the **average mark** of each class.
5. Use a **switch statement** to determine the grade of each class based on the average:
 - A: $\text{average} \geq 85$
 - B: $70 \leq \text{average} < 85$
 - C: $50 \leq \text{average} < 70$
 - F: $\text{average} < 50$
6. Print the results in the following format:
7. Class 1 average = 80 → Grade = B
Class 2 average = 92 → Grade = A
